Establishment of a Value Creation Foundation for Environment

Purpose of establishment

Based on Our Philosophy “Customers First,” we aim to create a balance of social, environmental, and economic values through our business activities, and to continue to be trusted and needed by our customers (*). Safety, quality, and the environment are the foundations for sustainable value creation. These are organized in the following framework in order to clarify basic approaches and guidelines and to ensure that all employees share and put them into practice.

*Taikisha defines overall society (all stakeholders) as customers in a broad sense.

Value Creation Foundation

Principles of Conduct **Code of Conduct**

Value Creation Foundation

Basic Environmental Philosophy

Based on our corporate philosophy of creating a company that contributes to society, and guided by our Environmental Management Vision and the guidelines for its realization, we aim to contribute to society by creating a rich environment and developing an industrial society through technologies that meet the needs of society.

Environmental Management Vision

We strive to improve environmental values for our customers and to protect global environment using Taikisha's solution technologies as a company engaged in business related to the environment.

Guidelines for the Realization of Taikisha’s Environmental Management Vision

1. Improving Environmental Management
- Actively engage in finding solutions for social issues related to the global environment by accurate understanding social trend changing day to day.
- Continuously apply environmental management system and reduce environmental risks.
- Actively disclose environmental information to the public while improving environmental education and awareness in our offices.

2. Promoting Environmental Business
- Promote energy management in life cycles and reduce CO_2 emissions during the operation of systems we supply.
- Develop technologies for exhaust gas and effluent treatment and contribute to the prevention of environmental pollution.
- Promote R&D of new eco-friendly technologies and products.

3. Developing Environmental Conservation Activities
- Check and minimize energy consumption in our offices and laboratories.
- Implement thorough measures regarding the surroundings, construction by-products and harmful materials at our workplaces.
- Promote green procurement.
